TrakIT

LOQUS[®]
BUSINESS INTELLIGENCE

TrakIT for fleet management

TrakIT provides real time vehicle and asset tracking for businesses. TrakIT is an enhanced communication channel that links your fleet to the office and provides detailed tracking data. This information is neatly presented online on a map so that you can quickly monitor where your fleet is and improve efficiency through historical report analysis. TrakIT provides you with a facility to effectively view and keep track of all your mobile assets. While there are many solutions on the market that provides real time data transfer, TrakIT key factor is that the solution works across major web browsers and on mobile devices.

Watch-boxes Geofencing

Users can circle or draw a polygon on special areas of interest on the map. TrakIT alerts you when your fleet move in and out of the defined area.

Notifications and Alarms

TrakIT is designed to limit the amount of time an operator spends monitoring, through notifications and alarms. These are auto generated based on user parameters. Users can be notified through on-screen pop-up messages, emails or SMS.

Multilingual

TrakIT solution is a multilingual solution and can be configured in the following languages: English, Italian and Spanish.

TrakIT reporting tool

Reporting

The solution provides various reports on when, where and how your vehicles are being used. You can use the information provided in the reporting tool to improve processes, reduce costs and measure performance. All reports are available for printing and can be exported to Microsoft Excel.

Journeys and Stops

Access to real-time and historical trip data according to ignition setting (on or off), location, mileage, duration and standstill time. This will help you to plan and schedule more efficiently, spot problems early and minimise on mileage.

Watchbox Events

Reports time and location when vehicles selected enter or leave a pre-defined watchbox or polygon over a defined time period.

Over Speeding

Identifies trips, exact point locations where vehicles were driving above the speed threshold.

Status Change

All vehicle statuses are time stamped and geocoded.

Mobile Tracking Summary

The summary shows a brief overview of mobile usage during specified time frames, including total journey time, total idling time and distance travelled.

Job ETA

Job reporting analysis, indicating deviation from estimated time of arrival at a particular location.

TrakIT key features

Stay reliable, stay connected, impress your customers

TrakIT

- Cross-browser & cross-platform technology
- Viewable on PC, Tablet or Smartphone
- Integration with digital and analogue devices
- Locate and track a specific vehicle
- Watchbox (Geofence) alerts to identify when vehicles have entered or left specific areas
- Standard and tailored reports for historical activity, out of hours use, speeding and location
- Trip replay function to display your historical journey data
- Monitor your fleet 24/7
- Real-time alerts about status changes in your vehicle
- Full system configuration control

Benefits

- Find out what's happening on the road
- Reduce costs and measure your performance
- Improve productivity
- Reliable trip statistics enable you to operate based on costs
- Identify vehicle closest to your customer
- Low footprint tracking solution with strong mapping and reporting tool
