

Immobilised vehicle census following the Abruzzo earthquake

Rome based Datatrak Italia, a subsidiary of Datatrak Plc has been helping the Automobile Club d'Italia IT arm, ACI Informatica, in a vehicle census aiming to return or scrap damaged vehicles, with the owner's consent.

The scheme was introduced after the devastating earthquake in Abruzzo, after which the head of the Italian Civil Protection, Guido Bertolaso, and the president of the L'Aquila Automobile Club, Rosanna Di Giocchino, signed an agreement for the vehicle census.

Data collection was carried out in the field by a group of 20 young people from L'Aquila using a solution that was designed and implemented by Loqus Solutions Ltd, a wholly owned subsidiary of Datatrak Plc in under two weeks. Steve Chetcuti, Datatrak Italia's managing consultant directed all the development and implementation efforts.
