

GPS Vehicle Tracking Software Donated to id-Dar tal-Providenza

In March 2011, Loqus Group decided to equip id-Dar tal-Providenza, the residential home for disabled people, with a market-leading vehicle tracking and fleet management solution. The contract, which is valid for an initial period of three years, is being provided completely free of charge.

Ten vehicles were fitted with GPS tracking devices which enable two way data communication with their drivers and provide regular vehicle location updates as well as journey details and mileage information. This technology allows id-Dar tal-Providenza to easily manage and keep track of their entire fleet of vehicles. The system not only enables id-Dar tal-Providenza to organize their transport activities more efficiently, but also helps in reducing their overall operating costs and improving their service.

“The tracking system provided by Loqus has facilitated our communication with our drivers and has greatly improved the management and organization of our transportation needs. We now have more control over our human resources and this has enabled us to boost our overall operational efficiency’, says Mr Alfred Bezzina, Administrator of Id-Dar tal-Providenza.
