

RouteIT

WHATEVER YOUR BUSINESS MODEL
WE HAVE **THE ROUTE OPTIMISATION** SOLUTION THAT'S BEST FOR YOU

TERRITORY & DISTRIBUTION NETWORK PLANNING & ANALYSIS

SINGLE ROUTE OPTIMISATION

SINGLE & MULTI-DEPOT MULTI-ROUTE OPTIMISATION

LOQUS[®]
BUSINESS INTELLIGENCE

WE MAKE YOUR BUSINESS **WORK SMARTER** NOT HARDER

RouteIT is an innovative and dynamic route optimisation and scheduling solution which allows customers to organise their deliveries, pickups and other jobs in the most efficient way possible. It provides a mechanism that will process an input list containing the job details and based on the available resources and predefined rules, generate a series of optimised routes.

HELPING YOU BECOME MORE EFFICIENT AND PRODUCTIVE, IMPROVE YOUR QUALITY OF SERVICE AND SIMULTANEOUSLY REDUCE YOUR COSTS

FEATURES

AUTOMATIC GENERATION OF OPTIMISED ROUTES

SINGLE AND MULTIPLE DEPOTS

DAILY & MULTI-DAY ROUTES

SUPPORT FOR TIME WINDOWS

SUPPORTS DIFFERENT DRIVER AND VEHICLE PROFILES

SUPPORTS MULTIPLE BUSINESS UNITS

ACCURATELY PREDICTS ROUTE AND STOP COSTS - DETERMINES THE ACHIEVED COST SAVINGS

FLEXIBLE, USER-ADJUSTABLE ALGORITHM

PLAN AHEAD - SIMULATE SEVERAL "WHAT IF" SCENARIOS

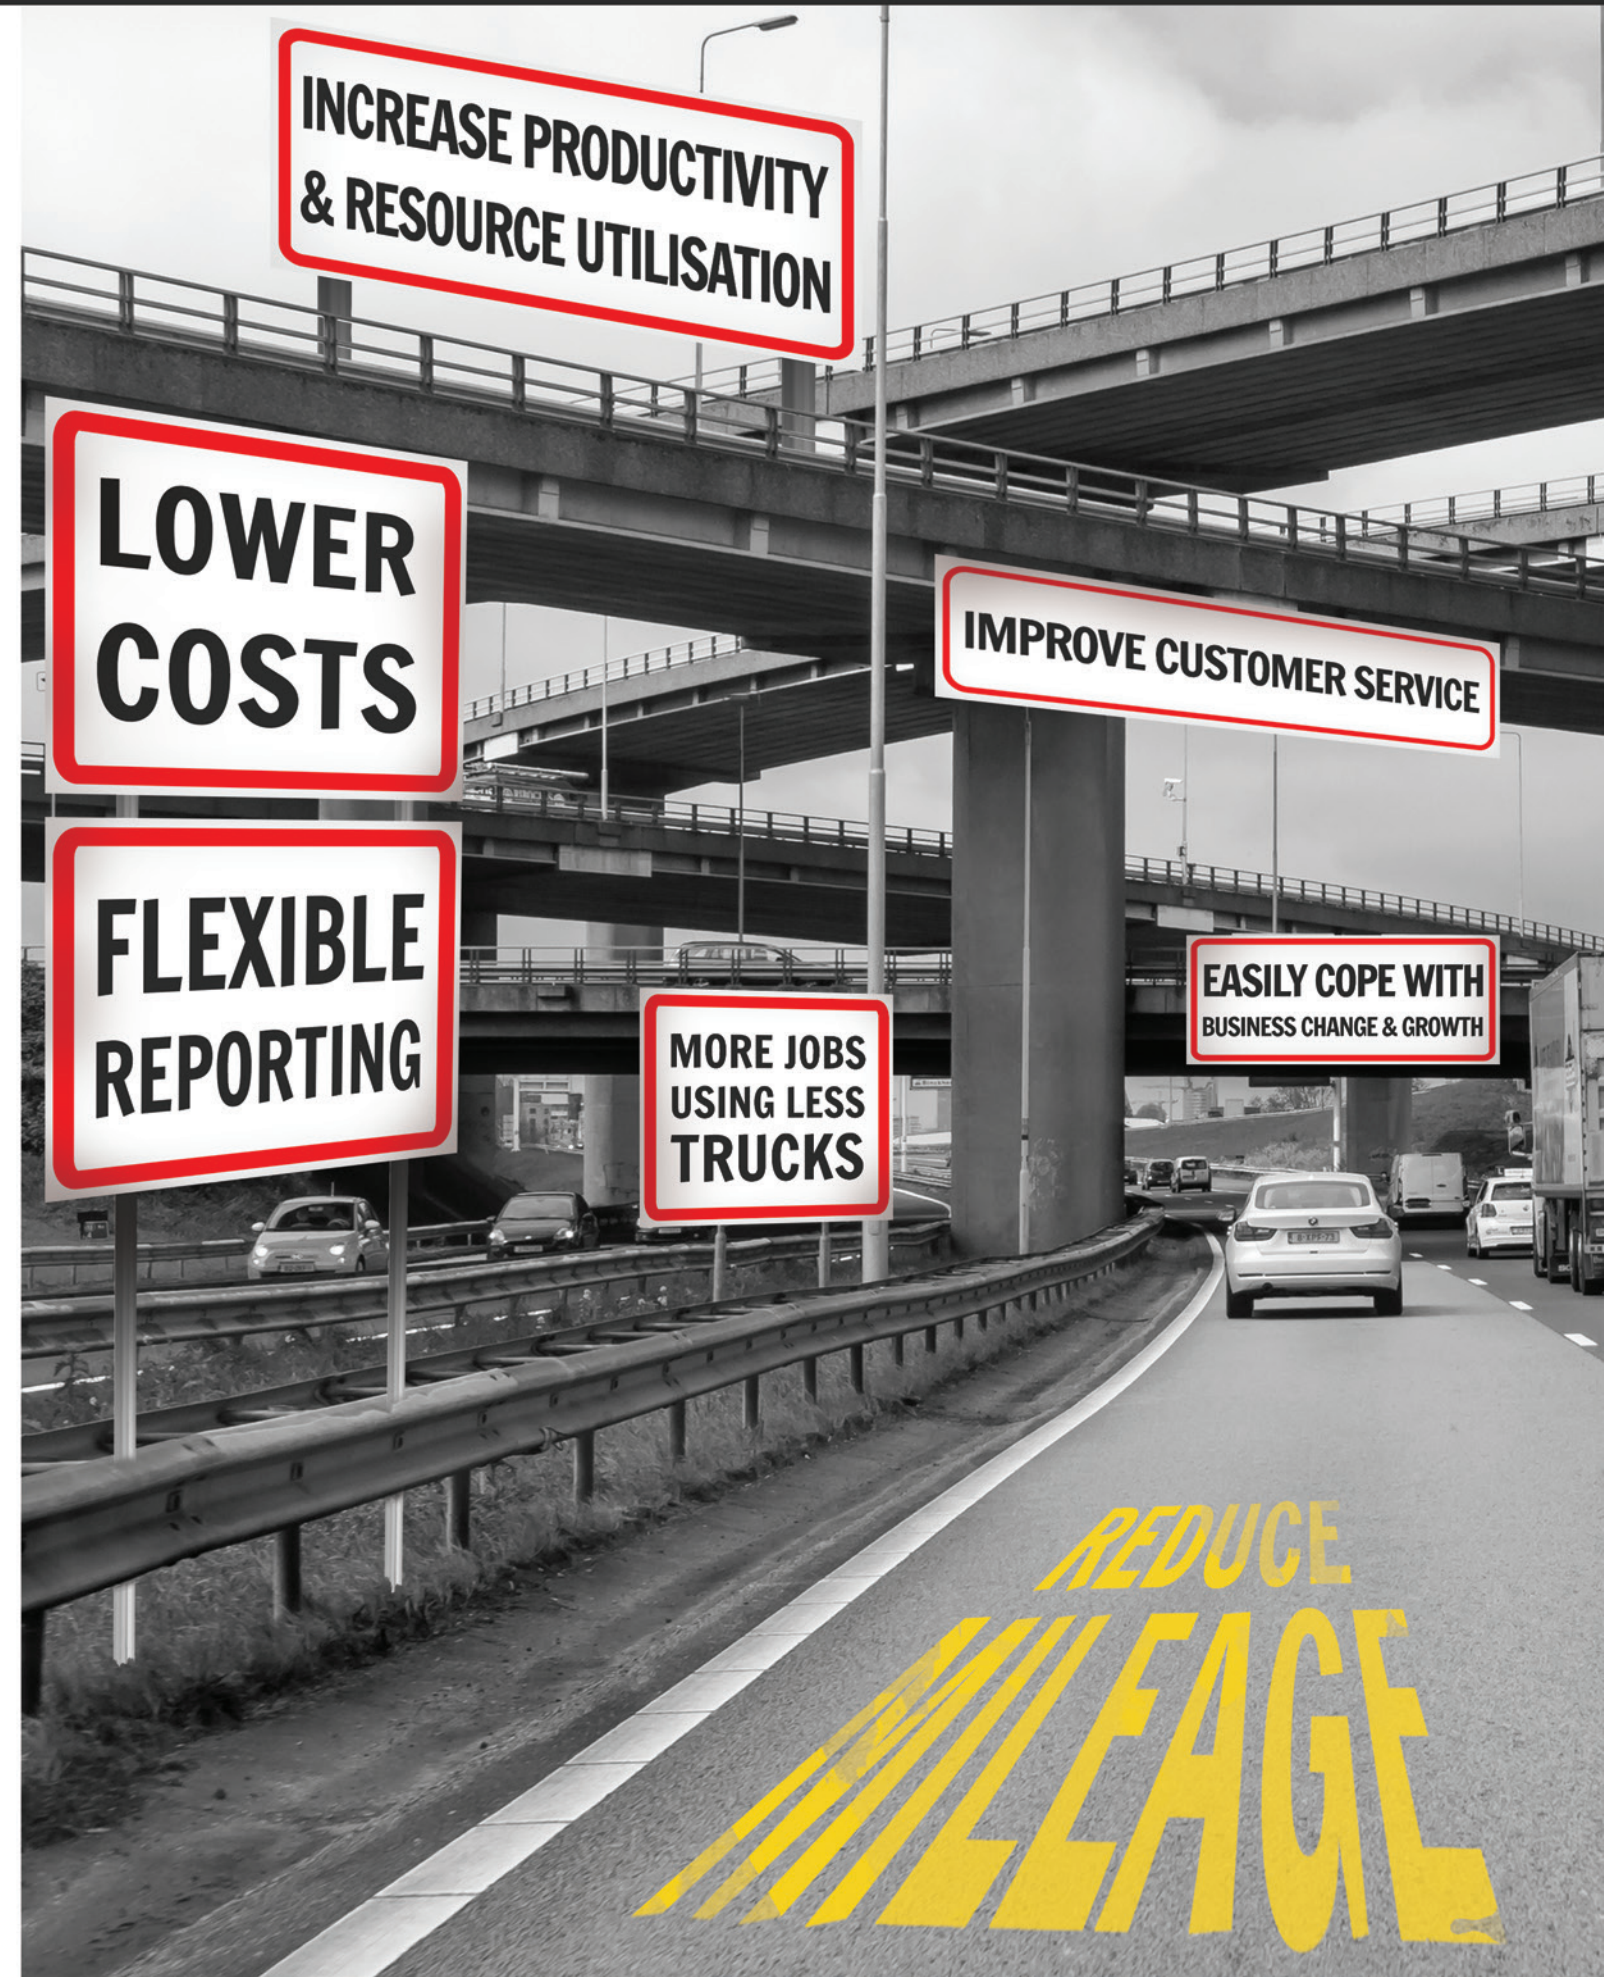

INTEGRATION WITH ERP, WMS, DISPATCH, TRACKING AND OTHER SYSTEMS

SINGLE & MULTI DEPOT MULTI-ROUTE OPTIMISATION

RouteIT automatically creates optimised routes for all the depots forming part of your transport network. It takes into consideration complex logistic parameters and constraints which are applicable to your business and allows you to manage them with ease. We appreciate that every customer has their own unique workflow and method of operation and kept this key requirement in mind when designing RouteIT. With its highly flexible engine and customisable parameters, RouteIT can easily be adapted to manage, simplify and improve your day to day operations without changing the way you work.

PlanIT - DISTRIBUTION NETWORK PLANNING

This powerful network planning tool helps simulate and analyse several "what if" scenarios in a delivery network. It combines depot capacity constraints with actual and projected network volumes to manage required alterations to the network setup. This tool can be used to determine the best depot to service a given territory, identify the best location when setting up a new depot and also offers capacity planning for current & future volumes.
